<b>Avoiding Close Working</b>	<b>p10</b>
<b>Cleaning</b>	<b>p11</b>

## Introduction

Construction sites operating during the Coronavirus Covid-19 pandemic need to ensure they are protecting their workforce and minimising the risk of spread of infection.

This method statement is intended to introduce consistent measures on our sites in line with the Government's recommendations on social distancing.

The health and safety requirements of any construction activity must also not be compromised at this time. If an activity cannot be undertaken safely due to a lack of suitably qualified personnel being available or social distancing being implemented, it should not take place.

Sites should remind the workforce at every opportunity of this method statement which is aimed at protecting them, their colleagues, their families and the UK population.

**Site managers will be required to communicate the below to the workforce, via toolbox talk. Individual subcontractors are also expected to take responsibility for ensuring the measures set out are adhered to.**

**If a site is unable to implement the measures set out below, it will be required to shut down.**

## Self-Isolation

Anyone who meets one of the following criteria should not come to site:

- Has a high temperature or a new persistent cough - follow the government guidance on self-isolation
- Is a vulnerable person (by virtue of their age, underlying health condition, clinical condition or are pregnant) as set out in the government guidance
- Is living with someone in self-isolation or a vulnerable person
- We requested that we are notified if any person who has been to site is subsequently required to self-isolate for any reason

## Procedure if someone falls ill on site

If a worker develops a high temperature or a persistent cough while at work, they should:

- Report to the site manager that they have symptoms
- Return home immediately
- Avoid touching anything on site
- Any canteen / toilet facilities used by the operative should be cleaned
- Cough or sneeze into a tissue and put it in a bin, or if they do not have tissues, cough and sneeze into the crook of their elbow
- They must then follow the guidance on self-isolation and not return to work until their period of self-isolation has been completed.

## Travel to Site

Although it cannot be enforced by JPC, wherever possible workers should travel to site alone using their own transport.

- Where this cannot be adhered to, operatives should space apart as far as is practicable while travelling.
- Sites should ensure they have adequate parking facilities for a possible increase in vehicles due to social distancing

## Site Access Points

Controls should be introduced at the site access point to minimise social contact and congregation

- Hand cleaning facilities to be provided at the site signing in point. Operatives to use this on signing in / out. This should be soap and water wherever possible or hand sanitiser if water is not available
- Where possible, the site manager will sign operatives in and out of site, to reduce the amount of people needing to enter the site office and handle the communal signing in book.
- Stop all non-essential visitors
- Allow plenty of space (two metres) between people waiting to enter site
- Regularly clean common contact surfaces in offices, toilets, canteens. Door handles especially.
- Reduce the number of people in attendance at site inductions and consider holding them outdoors wherever possible
- Drivers should remain in their vehicles if the load will allow it and must wash or clean their hands before unloading goods and materials.

## Hand Washing

Introduce additional handwashing facilities to site

- Provide additional hand washing facilities to the usual welfare facilities if a large spread out site or significant numbers of personnel on site
- Ensure soap and fresh water is readily available and kept topped up at all times
- Provide hand sanitiser where hand washing facilities are unavailable
- Regularly clean the hand washing facilities and check soap and sanitiser levels
- Provide suitable and sufficient rubbish bins for hand towels with regular removal and disposal.

**Sites will need extra supplies of soap, hand sanitiser and paper towels and these should be securely stored.**

## Toilet Facilities

- Restrict the number of people using toilet facilities at any one time. **The site manager will hold the key to the locked toilet facility, the key will need to be requested for access.** This will ensure a 1 in 1 out policy is maintained.
- Wash hands before and after using the facilities
- Enhance the cleaning regimes for toilet facilities particularly door handles, locks and the toilet flush as per other sections above
- Provide suitable and sufficient rubbish bins for hand towels with regular removal and disposal.

## Canteens and Eating Arrangements

Whilst a canteen facility must still be provided in order to comply with the appropriate CDM regulations, additional measures must be undertaken as below:

- Operatives are asked to take breaks in their vehicles if possible
- Break times should be staggered to reduce congestion and contact at all times
- Hand cleaning facilities or hand sanitiser should be available at the entrance of any room where people eat and should be used by workers when entering and leaving the area
- Workers should sit 2 metres apart from each other whilst eating and preparing food and avoid contact
- Communal crockery, eating utensils, cups etc. should not be used
- Tables should be cleaned between each use
- All rubbish should be put straight in the bin and not left for someone else to clear up
- All areas used for eating must be thoroughly cleaned at the end of each break and shift, including chairs, door handles etc.

## Avoiding Close Working

Workers should observe the government advice of distancing by 2 metres as much as is reasonably practicable.

- **Gloves should be worn by ALL operatives whilst working on site**
- Non-essential physical work that requires close contact between workers should not be carried out
- Work requiring skin to skin contact should not be carried out
- Plan all other work to minimise contact between workers
- Re-usable PPE should be thoroughly cleaned after use and not shared between workers
- Single use PPE should be disposed of so that it cannot be reused
- Where lifts or hoists must be used lower their capacity to reduce congestion and contact at all times

### Site Meetings

- **Meeting should be undertaken remotely where possible**
- Only absolutely necessary meeting participants should attend
- Attendees should be two metres apart from each other
- Rooms should be well ventilated / windows opened to allow fresh air circulation
- Consider holding meetings in open areas where possible.

## Cleaning

Enhanced cleaning procedures should be in place across the site, particularly in communal areas and at touch points.

Each site has a JPC operative / assistant on site who can fulfil the cleaning regime as required.

Wiping down should occur at the start, middle, and end of each shift:

- Taps and washing facilities
- Toilet flush and seats
- Door handles and push plates
- Hand rails on staircases and corridors
- Lift and hoist controls
- Machinery and equipment controls
- Food preparation and eating surfaces, kettle handles, microwave handles etc.
